Nixdorf introduces the first filing cabinet that speaks 12 languages and has the memory of an elephant.

**NIXDORF**
COMPUTER

The Nixdorf LK-3000.

The Nixdorf LK-3000 is a lot of things to a lot of people. It's a handy pocket size computer that can calculate a bank statement. It's a filing cabinet that always remembers a filing number. It's a language translator that can say „help" and more than 1100 other words and helpful phrases in 12 different languages. It's a diary, notebook and memo pad. It's all of these things and much more.

Your personal Computer.

A simple keyboard and easy-to-read-display combine to make the LK-3000 as easy to use as it is to carry.

All this reflects the Nixdorf philosophy of simplifying big computer operation and making it readily available for personal and professional use.

And besides, it's difficult to carry around a filing cabinet, much less find one that speaks Spanish.

Your personal Computer.

The key to the LK-3000's flexibility is in it's modular design.

Here's how the modular system works. First think of the LK-3000 as a cassette recorder. Now, imagine that instead of plugging in the latest top twenty, you simply insert different modules.

With each module change, the LK-3000 changes itself into a calculator, or different language translator, or a notebook or an Olympic record encyclopedia (there's even a double stopwatch with this module). Another module allows the LK-3000 to interface with much larger computers. And yet another one converts letter information to a number code for systematic filing. At your direction, we can even tailor a module specially for your company.

Nixdorf is constantly programming new modules for more and varied applications. So, by collecting the different modules you can build up a library of the functions that best suit your needs.
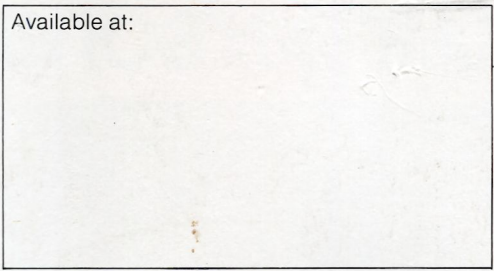

With the computer knowledge of Nixdorf behind it, the LK-3000's capabilities are almost without limit.

Modules presently available:
Electronic notebook, calculator, Filing system, 3 interface modules, Winter Olympic module incl. current Olympic Records, Summer Olympic module, Six-language module. Eleven different language modules from: English into Spanish, French, German, Italian, Polish, Portuguese, Greek, Swedish, Russian, Japanese, Arabic.

Dimensions:	95.3 mm deep x 156.3 mm wide x 31.8 mm high
Weight:	300 grams
Display:	16 character, 16 segment alphanumeric (LED).
Power source:	4 rechargeable built in NC-batteries, lasting 4 hours.
Standard equipment:	pouch and adaptor/charger (220 volt 50 Hz or 110 volt 60 Hz selectable)
